USER INTERFACE DESIGN

Experiment-4

Roll No: 240701089

Name : Chembeti Jahnavi

Flow chart for Assignment Submission app:

1. Start (Green Oval)

- The **Start symbol** represents the beginning of the process in the assignment submission system.
- It indicates when the user opens or initiates the application workflow.
- The **green colour** is commonly used to represent the **starting point of a system process**.

2. Open Submission App (Blue/Teal Process Box)

- This step represents the user launching the assignment submission application.
- It is shown using a **process rectangle**, which indicates an action performed in the system.
- The **blue/teal colour** represents **system operations or application processes**.

3. Login / Signup (Blue/Teal Process Box)

- In this step, the user logs in to their existing account or creates a new account.
- Authentication is necessary so the system can identify the user.
- The **process box** indicates that this is an operational step performed by the system.

4. User Authentication (Diamond – Decision Symbol)

- This is a **decision point** in the system where the application verifies the user's credentials.
- The diamond shape represents a **yes or no condition**.
- If the login credentials are correct, the process continues.
- If the credentials are incorrect, an error message is displayed.

5. Show Error Message (Orange Process Box)

- If authentication fails, the system displays an error message to inform the user that the login details are incorrect.
- The **orange color** represents **warning or error-related processes**.
- After this, the process ends because the user cannot proceed without valid authentication.

6. Dashboard / View Assignment (Light Process Box)

- After successful authentication, the user is directed to the dashboard.
- The dashboard displays all available assignments that the user can submit.
- This step allows users to view assignment details and deadlines.

7. Select Assignment (Blue/Teal Process Box)

- The user selects the assignment they want to submit from the list shown on the dashboard.
- This process helps the system identify which assignment the user is uploading.

8. File Valid (Diamond – Decision Symbol)

- This is another **decision step** where the system checks whether the uploaded file meets the required conditions.
- Conditions may include:
 - Correct file format
 - File size limits
 - Correct assignment file
- If the file is valid, the process continues to store the assignment.
- If the file is invalid, an upload error message is displayed.

9. Show Upload Error (Orange Process Box)

- If the uploaded file does not meet system requirements, an error message appears.
- The **orange colour** indicates a problem or warning in the process.
- The user is asked to upload the assignment again.

10. Upload Again (Blue Process Box)

- This step allows the user to correct the mistake and upload the file again.
- The process returns to the file validation step until a valid file is submitted.

11. Store Assignments in Database (Light Process Box)

- Once the file passes validation, the system stores the assignment in the database.
- This ensures the assignment is securely saved for future access by instructors or administrators.
- The **process box** represents a system operation involving data storage.

12. Show Submission Confirmation (Blue/Teal Process Box)

- After successful storage, the system shows a confirmation message.
- This confirms that the assignment has been successfully submitted.

13. End (Green Oval)

- The **End symbol** represents the completion of the assignment submission process.
- The green colour indicates that the workflow has successfully finished.

The prototype for Above Flowchart:
